Medical Reference given to IBRAGUIM KHATIIYEV

Patient data: IBRAGUIM KHATIIYEV (passport – 23ZX02140)

The following diagnosis was made:

Personality Development Disorder of Autism Spectrum. Delayed psychoverbal development in the form of sensorimotor alalia, psycho-emotional development and cognitive deficit.

After a 14-day course of intensive angiotherapy and psycho- and neuroprotective therapy with individual programs for daily correction of hemodynamic and neurodynamic parameters, blood pressure and arterio-venous balance using combinations of vascular, nootropic, rheological, anxiolytic and cardio- and angioprotective (actovegin, ginkgo biloba, mexiprim, metamax, L-lysine, neuroxon on a vascular corrective base).

It has been prescribed for the patient the following outpatient therapy for 1 month: to continue taking individually selected medicinal angiocorrective mixtures in syringes for the constant correction of angiotonus and neurodynamic imbalances, aimed at reducing brain ischemia and improving cognitive functions of the brain. Use medicamentous mixtures per 1-2 ml. intramuscularly on an individual basis. Be sure to store in the refrigerator. For transportation of drug mixtures by any means of transport, storage conditions: refrigerator or in a refrigerated bag with ice cartridges. Container of medicinal mixtures - in syringes. Do not change the container during transportation and subsequent use in order to avoid oxidation and chemical reactions, which may lead to deterioration of drug mixtures.

The following medications are added to the drug mixtures: barboval - 1 bottle, actovegin 15 amp, dexamethasone 3 amp.
