Medical Reference given to Kurghinyan Hayk

Patient: SLOYAN ICHRAN

After a comprehensive multidisciplinary check-up, it was diagnosed: personality development disorder on the autism spectrum. Delayed psycho-speech development in the form of sensorimotor alalia, psycho-emotional development and cognitive deficit. Hyperdynamic syndrome. Post-Covid vascular syndrome with severe microcirculation deficiency, a progressive course in the form of a combination of microthromboangiopathy and capillary hemorrhages, hemodynamic patterns of cardiovascular disorder and blood supply deficiency in the main arteries up to 50% of the physiological age norm.

Regarding the diagnosis, the doctor prescribed taking medications for 1 month on an outpatient basis: continue taking individually selected medicinal angio-regulatory mixtures in syringes for the gradual correction of angiotonus and neurodynamic imbalances and directing changes in myocardial ischemia using proprietary technologies individual angiocorrection on an evidence-based basis.

Take medicinal mixtures per 2 ml intramuscular. Save the mixture in the refrigerator. To transport medicinal supplies by any type of transport the main condition to store medications in a refrigerator or in a cooler bag with ice cartridges. Containers of medicinal mixtures are in syringes. When transported the container must not be changed due to avoid oxidation and chemical reaction, which may cause spoiling of medicinal mixtures.
